Improving Nature's Grains

Cochise

Six Row Spring Feed Barley

Cochise is a very early feed barley (similar to WestBred's Barcott) with good tolerance to Xanthomonas. Adapted to higher elevations in Southeastern Arizona.

University of AZ Multi-year Summary						WestBred 8 year Yield Trials		
Variety	Yield (lbs)	Test Weight (lbs)	Plant Height (inches)	Lodging %	Heading Date	Yield (lbs)	Lodging %	Plant Height (inches)
Cochise	6428	52.9	31	13	3/07	7595	42	33
Nebula	6266	53.4	33	13	3/17	6890	52	36
Baretta	6568	52.6	32	15	3/18	7012	65	34
Chico	6300	52.7	28	0	3/17	7397	5	29
Commander	6236	521.6	32	12	3/20	-	-	-

AGRONOMIC TRAITS OF CHICO

- | | |
|--------------------|--|
| Yield Potential | • Excellent |
| Test Weight | • Excellent |
| Plant Height | • Semi-dwarf , Same as Baretta |
| Lodging Resistance | • Very Good |
| Uniformity | • Excellent |
| Yield Stability | • Excellent |
| Maturity | • Very Early (10 days earlier than Nebula) |
| Threshability | • Very Good |
| Xanthomonas | • More tolerant than other varieties |
