

MT1159CL

HARD RED WINTER WHEAT

MT1159CL is the first Clearfield® hard red winter wheat variety bred for the Montana wheat grower. MT1159CL has average yield, acceptable winter hardiness and industry accepted quality characteristics. The Clearfield® Production System for wheat enables growers to control several hard to control weeds, including jointed goatgrass, persian darnel, feral rye, wild oats, downy brome, and many other grassy and broadleaf weeds.

● MANAGEMENT STRATEGY

1. Plant Certified Seed (Required for Clearfield® Wheat)
2. Plant at a rate of 950,000 to 1,250,000 plants per acre.
3. Soil sample fields and apply adequate fertilizer to meet nitrogen, potassium, phosphorus and sulfur needed to reach yield goals.
4. Follow the Clearfield® Wheat Stewardship Guidelines and the Beyond Herbicide label.
