

STAMPEDE

SPRING OATS

WestBred Stampede is a full season White Oat variety with very large leaves and high test weight which makes it an excellent variety for forage or grain.

AGRONOMIC DATA

YIELD POTENTIAL	:	Excellent
STRAW STRENGTH	:	Very Good
PLANT HEIGHT	:	Semi-dwarf
UNIFORMITY	:	Excellent
TEST WEIGHT	:	Excellent

RELATIVE MATURITY: 10 days later than Otana

SHATTERING RESISTANCE: Very Good
THRESHABILITY: Excellent

MANAGEMENT GUIDELINES

PLANTING DATE: As early as possible

PLANTING RATE: 40 - 65 lbs. per acre

FERTILITY: Maximum yields can be obtained when the major elements of nitrogen, phosphorus and potassium are provided in adequate amounts and ratios. The exact amount of nutrients to apply should be determined by a soil test prior to seeding. Tissue test during the season may be helpful in maintaining proper ratios. Nitrogen can be added through the irrigation water during the growing season if needed. Fewer nutrients are required on dryland plantings.

AREA OF ADAPTATION: Northwest and West Central United States: Washington, Montana, Oregon, Idaho Wyoming, Northern California, Utah, Colorado and the western parts of North and South Dakota.
