AGRONOMIC TIPS

- Respond to early planting but can be planted at any reasonable time.
- Plant on better ground. Targeted for high yield potential and protein.
- To help maximize yields potential, apply adequate levels of nutrients based on soil fertility tests and yield goal recommendations.
- Provide an early fungicide treatment (4-5 leaf stage) to control foliar disease.
- Best suited for high magement production systems.

The ratings are approximate and should not be considered absolute. Based on internally conducted trials relative to other WestBred® brand wheat varieties.

Individual results may vary, and performance may vary from location to location and from year to year. The result may not be an indicator of results you may obtain as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible.
